

Solar Dock Post Lites

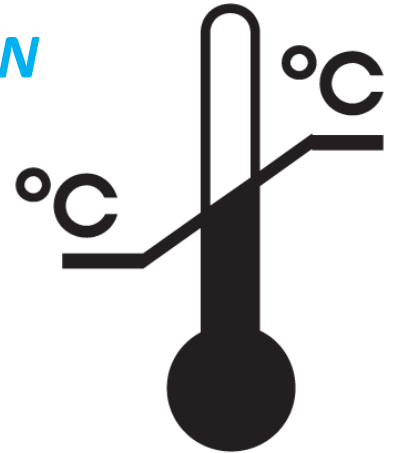

MODEL: LL-SDL-Round / Square / Rectangle

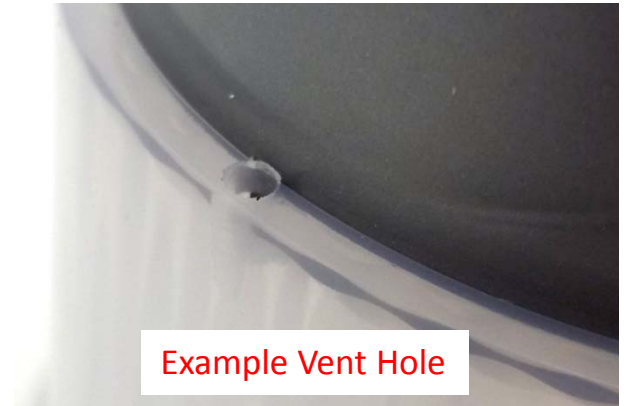

OPTIONAL HUMID CLIMATE MODIFICATION

NOTE: If you are located in a humid climate with constant change in barometric pressure, or constant quick changes between cool rainy and hot sunny conditions you may want to apply a modification to your solar dock post lights which will reduce & eliminate fogging or any moisture build up inside the light due to pressure differences caused in fluctuating pressure differences.

Constant temperature and pressure difference may lead to fogging or condensing water inside the light. This is not a result of rain water getting into the light but due to pressure differences and condensation. If you are experiencing any of these effects please follow the below quick modification by adding two vent holes.

1. Remove the top solar unit and turn the lens upside down on a flat surface.
2. Use a 7/64" approximate size drill bit and drill a VENT hole in the shown location at an angle.
3. Now make a second vent hole on the opposite side of the light
