

# Solar Underglow Notice

NOTE: if you have a generation 1 Model and have had troubles with the light turning off when bumped at night please contact Lake Lite at [sales@lakelite.com](mailto:sales@lakelite.com) or 260-918-2758 for your free battery spacers to resolve the issue.

Please use the provided magnets on the (-) side of the battery. This will provide a much tighter connection for the battery and prevent the solar light from turning off at night when bumped.

To turn your solar light back on at night shine a flashlight or cell phone light on the solar panel for a second and the light will reset.

Attach Magnet  
to (-) side of  
Battery and reinsert  
batteries into correct  
position
